FLOWER DETECTION APP

Problem Statement:

- Nowadays, It is difficult to identify the name of the flowers especially in india which vast country of flowers.

- People don't have enough knowledge of flowers .

- Google have the feature where you just have to click picture of flower and it will give you the all details of flowers but there are _False Positive case_ available
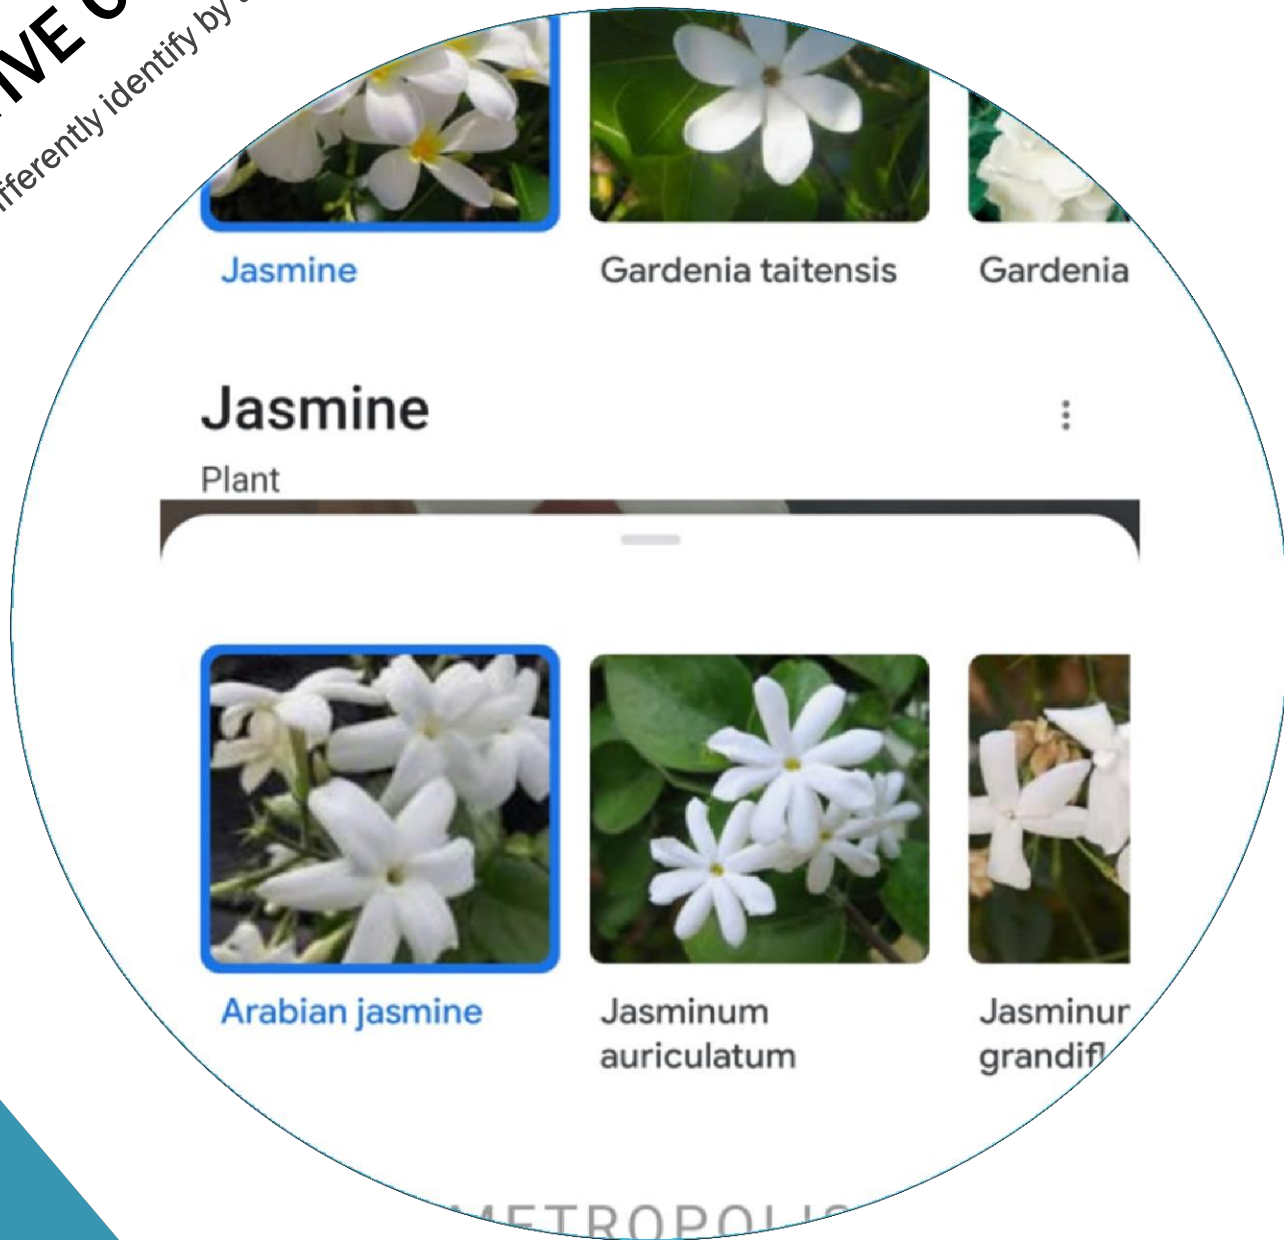

Objective:

- Aware people about flowers and plants because most of the plants and flowers are useful for medical treatment and people do not aware about it
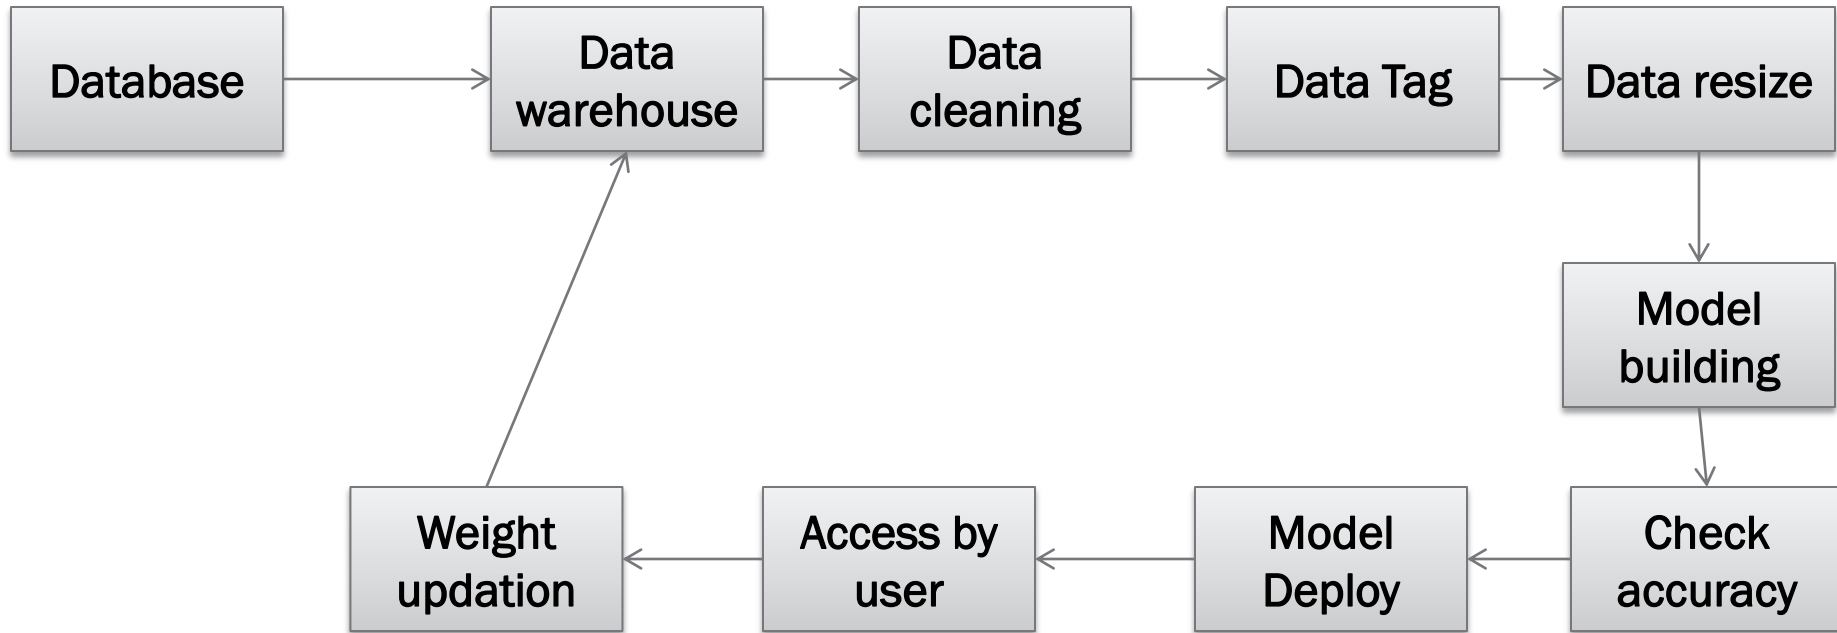

GOOGLE FALSE POSITIVE CASE

Picture of a one flower that has been differently identify by the google.

Solution of this problem upto
some extend

Limitation of this project

- This app only identify those flower on which this app has been trained

- Currently, my app has a ability to identify 5 type of flowers but I continues try to improve this model

Future of this project

- I will try to cover all the plants and flower that have been grew in last 100 years
